EDUCATION

Simon Fraser University

Bachelor of Science, Computing Science (Software Systems)

Sept. 2025 – May. 2027

Burnaby, BC

Langara College

Part-time Associate of Science, Computer Science

Sept. 2021 – Aug. 2025

Vancouver, BC

EXPERIENCE

Software Engineer Co-op

Dialpad

Jan. 2026 – Aug. 2026

Vancouver, BC

- Owned **Pinned Messages** end-to-end on **iOS (2,900+ lines across 67 files)**, shipping it to every channel, group chat, and DM in the app and driving **six follow-up releases** of feedback-driven iteration and analytics instrumentation
- Built the **Markdown/rich-text rendering** engines powering message display on **both platforms**: a **Swift** parser with a caching layer and a **1,387-line test suite**, plus **CommonMark**, mentions, and custom emoji in **Kotlin (3,900+ lines)**
- Replaced a fully manual, cross-team instrumentation workflow with an automated **3-repo, 2-platform pipeline** of **Claude Code** skills and a cross-repo dispatch workflow that authors, publishes, and wires new analytics trackers into **iOS and Android**
- Strengthened core reliability and architecture: fixed an out-of-bounds **NSRangeException** crash in message rendering, unified **Coil/Glide** image loading behind one abstraction, and normalized timestamp formatting across **140 files**, across **54 PRs** in four production repos

Linux Admin

C&L Multimedia

Sept. 2021 – Present

Vancouver, BC

- Automated HTML page creation with **shell scripts**, improving creation speed from **120 pgs/hr** to **10k pgs/hr**
- Automated the normalization of **100k+ products** in a legacy **FoxPro NoSQL** database via shell scripts, eliminating **800+ hours** of manual entry and ensuring error-free UPC-based naming

Software Developer Intern

14 Oranges

Aug. 2020 – Jul. 2021

Richmond, BC

- Built a **full-stack Android app** used by the QA team to report bugs to developers, backed by a **Java API manager** on **OkHttp3**, following a company-wide iOS to Android migration

PROJECTS

NeuroGolf | *Swift, Python, YOLOX, Firebase, CoreML, SwiftUI, Obj-C*

Jun. 2024 – Dec. 2025

- Developed a full-stack AI golf training iOS app using **SwiftUI**, **CoreML**, and **Firebase**, field-tested with teaching pros and collegiate golfers, with a joint comparison and motion analysis system that quantifies swing similarity from pose data
- Trained a **YOLOX object detection** model in **Python** to detect clubheads and golf balls, optimizing weights and configuration for mobile deployment while achieving **over 0.5 mAP** on a custom-labeled dataset

Cadence – Personal AI Environment | *Swift, Supabase, Vercel, React/TS, Vite, OpenAI*

Nov. 2025 – Dec. 2025

- Built a multi-platform productivity environment that turns daily voice recaps into structured timelines and analytics, using an iOS **SwiftUI** app whose **on-device Whisper** transcription delivers **60% more** contextually accurate speech processing, on a **Supabase + Vercel** backend
- Implemented an auth/key-protected pipeline: audio → auth → transcription → **LLM-generated JSON** → **Postgres** → secure, real-time dashboards of long-term productivity patterns

TECHNICAL SKILLS

Languages: Swift, Kotlin, Java, Python, C++, TypeScript, JavaScript, Obj-C, SQL, BASH, HTML/CSS

Frameworks: SwiftUI, UIKit, CoreML, CoreMotion, Vision, React, Next.js, Node.js, JUnit, OkHttp3

Developer Tools: Linux, Git, Docker, Firebase/GCP, Supabase, Postgres, Vercel, Vite, Springboot, AWS Bedrock

Libraries: pandas, NumPy, Matplotlib, TensorFlow, Keras, Coil, Glide

Interests: Golf, Hockey, F1, Ski/Snowboarding, Entrepreneurship, JavaDoc Comments
